WARREN COUNTY

_Elymus glaucus_ Buckley

Warrensburg. Charles H. Peck, July. Determined by Prof. A. S. Hitchcock, to whom was submitted a large number of undetermined grasses collected by Professor Peck. The range given for this species is "Ontario and Michigan to British Columbia, Colorado and California." The Warren county collection constitutes not merely a new species for the state flora but a remarkable eastward extension to the known range of the species.

_Pyrola asarifolia_ Michx.

Bog near Horicon. Dr Charles H. Peck, July. The exact year is not given, but the specimens were detected amongst some undetermined material collected between 1907 and 1910.

WYOMING COUNTY

_Cathartolinum sulcatum_ (Riddell) Small

Near Portageville. Dr Charles H. Peck, July 1908. Detected among the undetermined specimens of Professor Peck's collecting, and rather easily distinguished by the united styles.

_Lathyrus ochroleucus_ Hook.

Near Portageville. Dr Charles H. Peck, May 1905. This must be regarded as one of the rare species of the state flora. It was collected nearly three-fourths of a century ago at Watertown, Jefferson county, by Crawe, and in Paine's Catalogue of the Plants of Oneida County and Vicinity two additional localities are mentioned, namely, Gorham, Ontario county (Sartwell), and Monroe county (C. M. Booth). In addition to these stations it has been collected at Penn Yan, Sartwell (in Nat. Herb.); western New York, Sartwell (in Gray Herb.); Lake Chautauqua, J. R. Churchill (in Gray Herb.); Ithaca, Tompkins county by Charles S. Sheldon in 1878 (N. Y. State Herb.); at Belfast, Allegany county, and Carrollton, Cattaraugus county, by Charles H. Peck. With the exception of the Watertown locality, its range appears to be confined in this State to the western and southwestern counties.

The species was collected at Belleville, Ontario, June 1877, by Professor Macoun, a station even farther north than Watertown. Its distribution in New York State is shown by the accompanying map.
A BIBLIOGRAPHY OF THE BOTANY OF NEW YORK STATE

One of the signs of progress in botany is the increasing attention given to the study of local vegetation and its ecological relations. A local flora has been published for nearly every section of the State in addition to a large number of county and sectional floras, which for the most part are exceptionally complete. The number of published papers dealing with various phases of local botany in this State is very large and one of the disadvantages to be encountered in the study of local flora problems is the difficulty of locating quickly the references to the published literature dealing with a given locality or section.

The bibliography here presented aims to group the titles bearing upon the subject in such a manner as to show the nature, quantity and authorship of the various studies upon the flora of the State and its natural and political subdivisions.

Citations dealing with economic botany (agriculture), plant pathology and forestry have been for the most part omitted, although it is obviously difficult to draw a line of distinction, especially where record is made in such articles to native species of fungi or flowering plants constituting an original observation or addition to the flora of some section of the State. Upon this ground alone have several titles dealing with plant pathology, agriculture and forestry been admitted.

Since the aim of this bibliography is to present the citations by localities rather than by authors, the arrangement takes the following order:

1 New York State in General
2 State Botanist's Reports
3 Adirondack Mountains
4 Catskill Mountains
5 Central New York
6 Hudson River Valley
7 Long Island
8 Susquehanna Valley
9 Western New York
